# **MODULAR MANIFOLDS** FOR HEATING AND COOLING SYSTEMS

#### Art. 3462

Art. 3465

Art. 3561\*

\* For the manifolds with flowmeters view the technical sheet ST.04.03.00.

### DESCRIPTION

1.

FAR offers a range of 1" and 1"1/4 modular manifolds suitable for installation in heating and cooling systems, to distribute flow to radiators or to floor, wall and ceiling, in case of underfloor heating systems; while FAR modular manifolds in 1"1/2 version are ideal for underfloor heating systems serving large surface areas (consult the technical sheet ST.04.02.00). FAR manifolds feature a special configuration which ensures easier flow transit, thus reducing flow resistance (Fig.1). Moreover thanks to a simple safety system, it is possible to replace the two O-ring seals on the body without any need to drain the system (Fig.2).

Manifolds are available pre-assembled, complete with supply

manifolds with built-in lockshield valves for system balancing and return manifolds with directional arrows, intermediate connection complete with automatic air vent valve, 0-80°C temperature gauge and drain cock. On the return manifolds it is possible to remove the blue handles and assemble the thermo-electric actuators, in order to control opening and closing of outlets by means of a thermostat or control unit. The FAR inspections boxes offer a range of solutions for installation in purpose-designed housings.

All manifolds are available with FAR 24x19 copper pipe connections up to 16mm, up to 20mm for plastic and multilayer pipes and also with eurokonus connections.

## 2. SYSTEM BALANCING

When system balancing, the position of the micrometric lockshield valve can be set with the aid of a 5 mm Allen wrench. To carry out calibration just remove the protective cap - no need for a wrench. In the following pages you will see flow resistance diagrams relating to manifolds with built-in lockshield valves - varying according to the number of lockshield valve turns.

It is possible to install flowmeters, or temperature gauges on manifolds connections to balance circuits.

FAR also offers manifolds with built-in flowmeters, which permit to directly read and control the quantity of fluid distributed to each terminal in l/min.

For further information about manifolds with flowmeters view the technical sheet ST.04.03.00.

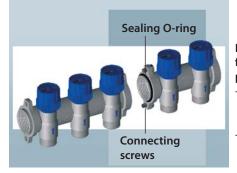

#### **CONSTRUCTION FEATURES** 3.

FAR modular manifolds are available with male-female and flanged connections. The flanged versions are available with 1" size and an o-ring seal between a manifold and another.

In order to identify connections place the grey disc with reference notation onto the handle positioning it on the locking notch - then turn the second blue/red disc so that the window is positioned on the desired terminal.

In order to connect flanged manifolds proceed as follows: Insert 34.59 x 2.62 O-ring as shown

in the figure

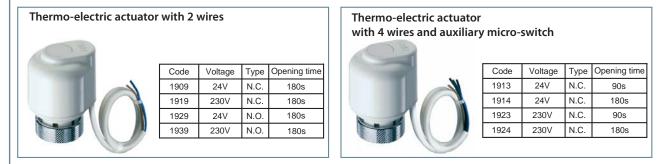

Insert screws in the special seats and tighten

#### **INSTALLATION COMPONENTS** 4.

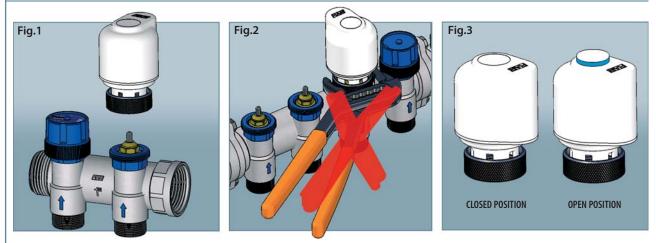

#### THERMO-ELECTRIC ACTUATORS 4.1

Thermo-electric actuators are available in a 2-wired version, with phase and neutral wire, or in a 4-wired version, with connection to an auxiliary micro-switch. Opening /closing time is 180 seconds, with an option of 90 seconds, but only with a micro-switch. The actuators range comprises two types ie with working voltages of 24V or 230V. Both are available in Normally Closed (NC) or Normally Open (NO) versions. Without an

electrical supply, if the actuator is of the Normally Closed (NC) type, the valve, in case of manifolds the outlet, will remain shut; while, with an electrical supply an actuator of NC type will open the valve. Conversely, if the actuator is of the Normally Open (NO) type, without an electrical supply the valve will remain open.

### INSTALLATION ON MANIFOLD

No adapter is required in order to install the actuator. Simply unscrew the blue handle from the manifold and then screw the actuator on the ring (Fig.1). The actuator must be lightly hand-tightened. Do not use any wrenches, which could the Technical Sheet ST.04.05.00.

damage the actuator itself (Fig.2). Open and closed positions can be easily established with the aid of a blue strip located on the indicator (Fig.3). If any further details are needed, consult

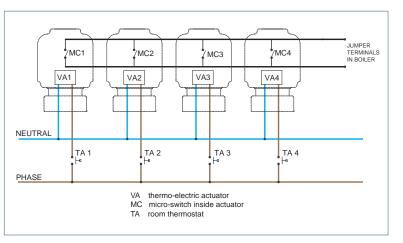

# MODULAR MANIFOLDS FOR HEATING AND COOLING SYSTEMS

Thermo-electric actuators can open single circuits by means of a thermostat. Use of an auxiliary microswitch in the actuator makes it possible to shut down other equipment, such as circulating pumps, when valves close.

#### The illustration shows an example of installation for connection of some thermo-electric actuators equipped with auxiliary micro-switch.

Parallel connection makes it possible to set up the system such that once the last actuator closes, the pump or the boiler will also shut down. In this arrangement, once the first actuator opens it will permit the system to switch on, thus avoiding waste of electricity and reducing consumption.

# 4.2 TEMPERATURE GAUGE FITTING

Balancing is generally designed around the dimension of the pipe used, but a more detailed calibration is required once system is complete by means of lockshield valves and temperature gauges installed on the return manifold from boiler. Regulating the flow via micrometric lockshield valves on the supply manifold, it is possible to increase or decrease the circulating flow rate and thus the return temperature of each circuit can also be regulated to the design value.

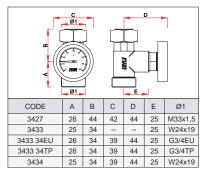

During installation it is essential to screw the nut on the corresponding outlet with the aid of a 27mm wrench. Sealing is guaranteed by an O-ring.

To the bottom of temperature gauge fitting can be connected copper pipes up to 16mm and plastic and multilayer pipes up to 20mm.

#### **Technical features**

Temperature rang	<b>ge:</b> 0-80°C

Body materi	ial: CW617N
Temperature gauge housir	ng: zinc-coated steel
Accuracy ratir	ng: 2,5

## **Dimensional features**

# 4.3 FLOWMETER

In modern heating system and particularly in panel radiator systems, circuit balancing is very important in achieving uniform flow distribution. The type of pipework to be used, radiator outputs, circulating flow, etc must all be calculated at the planning stage. Once the system is in operation, it will be necessary to adjust flow values as they will always differ - up or down for any given value - from those set in the design. This can be done by using manifolds with built-in micrometric lockshield valves to modify the quantity of water circulating in individual circuits by reading the flow on the outlet of the flowmeter. Flowmeters can be installed in any position bearing in mind the direction of the incoming flow indicated by the arrow on the body. They are available with scale from 1 to 3,5 l/min or from 2 to 8 l/min depending on system requirements.

Simple connection of the flowmeter to all FAR manifolds used in association with copper, plastic and multilayer pipes can be achieved by means of a swiveling nut.

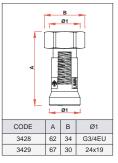

The flowmeter can be connected to copper pipes up to 16mm and plastic and multilayer pipes up to 20mm.

### **Technical features**

Working temperature:	95°C
Max working pressure:	10 bar
Scale:	1-3,5 2-8 l/min
Accuracy:	±10%
Body material:	CW617N

### **Dimensional features**

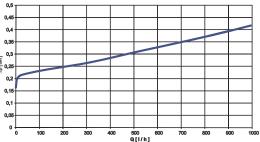

#### **BY-PASS KIT** 4.4

During operation one or more lines may be closed, i.e. in those areas in which there is no demand for heat transfer fluid. In this case there will be an increase in the resistance from these circuits and, therefore, the pump will work harder. In order to avoid this, a by-pass kit with built-in differential pressure valve is available for connection to the manifolds. Once a pre-set pressure level is reached this valve ensures discharge of excess flow on the return manifold allowing the pump to maintain a virtually constant speed.

Differential pressure of by-pass opening

#### Typical differential pressure of by-pass kit

The above diagram shows pattern of flow passing from a differential by-pass valve, depending on upstream pressure. Opening is set at about 0,2 bar and, at this point, excess flow is sent back to the boiler.

#### 4.5 INSULATION

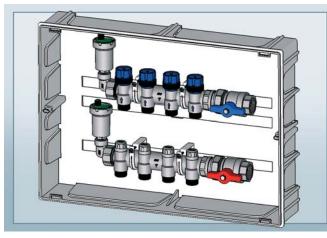

PPE pre-formed anti-condensation insulation can be used to thermally isolate manifolds. Insulation is available for modular 2, 3 and 4 port manifolds and must be assembled in the box after manifold installation.

Special insulation (Art.9301) has been designed for manifolds complete with air vent valves, drain cock and temperature gauge.

Closing plugs Art. 9302 suitable for use with this insulation are offered for supply manifolds, so that they will be fully isolated, once the lockshield valves have been regulated.

# 4.6

# **INSTALLATION IN PLASTIC INSPECTION BOX**

Modular manifolds can also be installed in "TUTTO" plastic inspection boxes. These plastic boxes are also designed to accommodate manifolds equipped with automatic air vent valves and are available in the following sizes:

Art.7410 50, with sizes: 500x350x100 Art.7410 70, with sizes: 700x410x100 Art.7410 90, with sizes: 900x410x100

Location and fixing of manifolds is carried out by means of plastic supports suitable for a range of height locations. These permit optimum positioning of the pipework, allowing the manifolds to be placed in the most suitable position.

For further details consult the Technical Sheet for inspection boxes ST.06.02.00

6.

# 5. INSTALLATION IN METAL INSPECTION BOXES

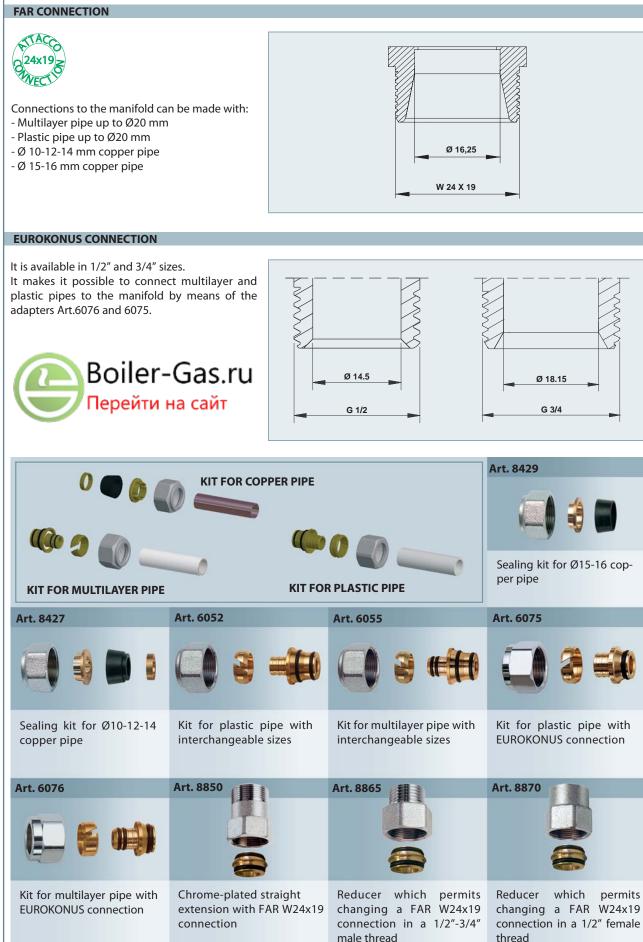

The tables below show the maximum recommended number of outlets to install. Dimensions have been calculated on the basis of an intermediate connection complete with air vent valve, temperature gauge and drain cock plus a terminal plug and ball zone valve.

Nominal pressure: 10 bar
Working temperature range: 5÷95°C
Compatible media: water, water with glycol

NB: The above features are valid for both manifolds with valves and manifolds with lockshield valves
